

Md Ali Khan

AI-Assisted Engineering | Technical Product Owner | Engineering-Grounded PO | 11y Engineering (QA + DevOps + React)

Details

mdalikhan031993@outlook.com

Skills

- Product Ownership
- Software Development Life Cycle (SDLC)
- Test Automation - UI and API
- CI/CD - Jenkins/Github Actions
- Front-End Development using React
- AWS and Private Cloud
- Copilot sdk and Copilot chat
- Claude Code
- Monitoring - Splunk, Grafana
- UI Test Automation Framework - Wdio, Playwright, Selenium
- ETL Testing - Pyspark, Airflow
- Docker and kubernetes
- Javascript and CSS
- Coding Language - Python, C#, Java
- Performance Testing - Jmeter
- Database - Microsoft SQL Server, Postgress
- Sonarqube & OWASP ZAP

Professional summary

Technical Product Owner candidate with 11 years of engineering experience across test automation, DevOps, and React — with hands-on AI-assisted delivery using Claude and GitHub Copilot (custom agents, prompt engineering, and Copilot SDK integrations) to accelerate real engineering work. As an SDET, I understand product quality and test coverage — so I can shape stories with testability and edge cases baked in from day one. DevOps work has taken products end-to-end from build to production. React development keeps me close to actual delivery. Visit my personal website to explore my work on AI — helloiamali.com.

Experience

Staff SDET(Lead QA software engineer), SS&C Eze

Apr 2026 – Present

- Contributed to frontend development, delivering UI enhancements and resolving application bugs.
- Provided support for DevOps pipeline setup, maintenance, and troubleshooting.
- Managed and maintained quality infrastructure and codebases across API and UI components.
- Built an automated PR review solution leveraging an in-house LLM that performs code reviews upon PR creation, providing contextual inline feedback similar to that of an experienced engineer
- Established strong proficiency in AI-assisted engineering practices, leveraging Claude and GitHub Copilot to accelerate development, code reviews, debugging, and knowledge discovery through effective use of prompts, agents, skills, and custom instructions.
- Integrated Claude and Copilot agents with MCP servers to automatically retrieve Jira requirements and assist in end-to-end code development within our codebase, improving developer productivity and delivery speed.

Senior software Engineer in Test, SS&C Eze | Hybrid

May 2023 – Apr 2026

- DevOps and Quality Engineer
- Designed and developed Jenkins pipelines and seed files for multi-service applications in collaboration with SRE teams, streamlining CI/CD processes.
- Managed deployment troubleshooting and resolved production issues efficiently.
- Configured monitoring solutions using Splunk, Grafana, and PagerDuty, integrated with communication platforms like Slack and Microsoft Teams for streamlined incident management.
- Implemented quality checks for GitHub repositories, including SonarQube integration and automated pull request validations using GitHub Actions.
- Built a scalable UI automation framework using Webdriver IO with ReportPortal integration, leveraging containerization for efficient parallel test execution via Jenkins.
- Developed and maintained BDD-based automated test scenarios for UI, API, and performance testing frameworks using Python and Playwright.
- Automated API testing using Postman collections and an in-house framework based on Frisby.js.
- Developed security testing workflows for DAST (Dynamic Application Security Testing) using ZAP, integrating results into GitHub Security.
- Conducted ETL pipeline testing aligned with the Medallion Architecture using static data, and currently enhancing dynamic ETL testing with AI-driven models.
- Authored quality roadmaps and best practices, emphasizing on-call readiness and production issue management as part of Agile teams.

Senior Analyst, ValueLabs | Hyderabad, Telangana, India · Remote

Sep 2019 – May 2023

- Leading qa/automation process using c# selenium
- Mentoring Development team within agile capacity to enhance product quality
- Providing L2 support to product users
- Functional and API testing
- Performance testing
- Part of org talent acquisition team to hire candidate from selenium developer background
- Maintaining build process using GIT and Bamboo for development team

Consultant-II, Neudesic | Greater Hyderabad Area

Apr 2019 – Aug 2019

- Have worked as a QA automation. Responsible for designing architecture of automation framework.

Senior Test Engineer, Mindtree | Pune Area, India

Jul 2015 – Apr 2019

- Admin UI testing. Individual contributor in terms of deliverables.
- POCs based on Java console application. Test automation framework.
- Led KT programs within team
- Selenium Automation in C#
- API automation using soapui and restui tools
- DB testing

Education

Bachelor of Technology (B.Tech.), Electronics and Telecommunication, Biju Patnaik University of Technology, Odisha

May 2011 - Apr 2015

, Kendriya Vidyalaya Surda | Jharkhand

Apr 1999 - Mar 2011

Languages

Hindi

Native

English

C1 - Advanced
